### Introduction

This document provides a guide to written sources of operational good practice information for adventure activities. Written sources of information should be supported by technical expert interpretation in the context of each operation.

Where legislation requires a specific good practice document to be followed, it is a legal requirement to do so. Where good practice information is developed by a regulator, it is expected to be followed or an alternative practice must be justified as being at least as good. All other written sources of information require careful consideration before deciding how much they can be relied on to inform good practice.

Factors to consider include:

- Is it informed by suitable experts and broadly consulted?
- Is it current?
- Do New Zealand operators support the document as representing good practice?
- Does it cover all relevant topics?

Activities without reliable sources of written good practice information rely very heavily on technical experts to represent good practice.

The information in this document is split into two tables: Table 1 for activities with Activity Safety Guidelines (ASGs) and Table 2 for those without. ASGs are considered to be a reliable source of good practice information.

The table provides audit teams, operators, and other interested parties with a list of documented resources of operational good practice for adventure activities. This list is not exhaustive or prescriptive, either in terms of the adventure activities or possible good practice documents.

Some adventure activities need facilities, equipment, or other services. The table does not include references, such as engineering standards, building codes, manufacturers' recommendations and so on, that could be used to assess these elements.

This document will be updated from time to time – check [www.supportadventure.co.nz](http://www.supportadventure.co.nz) for the latest version.

*Note:* For information on what constitutes good practice, and on how to use written and verbal sources of good practice information, see *Good Practice for Adventure Activities - a guide for auditors* on [www.supportadventure.co.nz](http://www.supportadventure.co.nz)

## Table 1: Adventure activities with ASGs

Where there are other relevant sources of good practice written information, they are referred to in each ASG.

## Table 2: Adventure activities without ASGs

The titles of guidance documents (guidelines, codes of practice, rules, or standards) do not indicate how reliable the information may be. Consider the factors listed at the beginning of this document when deciding how much to rely on written sources of information.

Although they do not describe good practice, the scope and syllabus of [New Zealand Outdoor Instructor Association](#) (NZOIA) disciplines indicate content areas to consider.

This is not a definitive list of adventure activities that are subject to the Adventure Activities Regulations.
